Introduction

Pre-requisite

Widget not displayed on Website or Mobile App

Customer not connected to Bot

Incorrect Bot Flow/Error

Conversation routed to incorrect Agent skill or no routing

Conversation routed outside working hours

Other applications not displayed to Agent post-transfer

For 3rd party channels, response type not displayed

Skill/Role assignment

Unable to view/resume the conversation

Unable to access the secure form

Mask/Remove the PCI data from conversation

Unable to login to Liveperson Platform

Delete the user/Remove access for the user

LINE message is not getting sent to customer (or) vice-versa

Add/Update/Modify the Pre-defined content

Incorrect customer Info in Detail Summary Tab

Introduction

- This document is intended for the Support Team and is for internal use only, providing guidelines to debug common messaging-related requests across all client setups.

Pre-requisite

- Always retrieve the Conversation ID (Conv ID) or any specific information such as LOB, Skill, Customer Info, etc., to narrow down the issue for debugging.
- Identify the LP account using the Client info if available.
- Determine if the issue is specific to a particular user (Agent or end-customer) or affecting all users.
- Check the Service Status Dashboard under the Profile Icon to ensure there is no downtime or global issues.
- Use the 'Subscribe to get updates' option to receive notifications about any downtime specific to the LP accounts.
- For website & Agent-related issues, ask the user to switch to a different browser and check if the same issue occurs. If the problem persists, request the team to provide a HAR file for further analysis. (Steps to retrieve a HAR file from a browser should be added here.)
- Before reaching out to LivePerson Support, gather answers for the following questions:
 - When did we start noticing the issue?
 - How many agents/customers are affected?
 - What is the priority of the issue? (High/Medium/Low)
 - Do you have a HAR file, Screenshots, Conversation IDs, etc.?

Widget not displayed on Website or Mobile App

- For Website:
 - Use the browser's Inspect tool to verify the presence of the "lpButtonDiv" element on the site.
 - Ensure the website is linked to the correct LP Site ID.
 - If the campaign is based on engagement attributes, confirm that the website is passing the correct values. (If incorrect, coordinate with the Front-End (FE) Team.)

- Verify that the entry point is properly configured in the LP Campaign settings.
- Check that all required engagement attributes are passed correctly using the Inspect tool.
- Test the authentication settings by toggling them to identify if authentication is causing the issue.
- For Mobile App:
 - Collaborate with the Mobile Team to validate all the above points on the app.
- For Login Creds:
 - Contact the QA Team to obtain test login details.

Customer not connected to Bot

- Verify if the conversation is routed to the correct skill (Bot Skill):
 - If not, check the Campaign for Web/Mobile channels.
 - For third-party channels, request the Liveperson Technical Team to update the skill.
- If the conversation is routed to the Bot Skill, but the bot is not responding:
 - Ensure the Bot User has the bot skill assigned and user status is active.
 - Confirm that the Bot Agent Connector is added to Conversation Builder (CB), is running, and has a status of "Online."
 - If the issue persists, try restarting the agent connector or deploy the agent connector from Demo to Production.

Incorrect Bot Flow/Error

- Type "display userid" from the customer's end in the channel.
- Copy the userid from *All Conversations* > Select the conversation > Copy the Conv ID.
- In CB > Open Preview > Expand the window to view Bot logs. In the Bot logs search bar, paste the copied ID and refresh.
 - Adjust bot training and conditions as needed based on the flow.
 - For API issues, confirm that the correct production information is used, or notify the API Team if an error occurs.

Conversation routed to incorrect Agent skill or no routing

- Ensure that the agent skill is assigned to the required profiles.
- Confirm that FaaS is redeployed with the necessary routing updates.
- Verify that the bot routes to the correct skill in production.

Conversation routed outside working hours

- Confirm that Working Hours are mapped to all agent skills.
- Check if the working hours are correctly configured in the bot flow.

Other applications not displayed to Agent post-transfer

- Ensure the application functions correctly in the browser.
- Verify that the skill is added to the widget, and "Manager View Mode" is unchecked under Night Mode.
- Ensure all recent changes are deployed and the correct configuration is available.

For 3rd party channels, response type not displayed

- Confirm that the response type is supported by the channel ([Ref 1](#), [Ref 2](#))
- Verify that the response length and character count meet the channel's limits. (For Dev Team)

Skill/Role assignment

- If the Request is from an Agent - Advise them to contact their Agent Manager for assistance.
- If the Request is from an Agent Manager - Provide the necessary roles, skills, and group details that they need to manage.

Unable to view/resume the conversation

- After enabling rollover feature in the Global PROD account, an issue was identified where Agents could not access/resume their conversations under the All Conversations tab. As a workaround (provided on 26th Sep 2024), the Agent Manager should follow these steps for the Agent:
 - Go to Manage > Users & Skills and select the profile of the Agent you want to update.
 - Under Assignment, select and add 'AgentViewHistory'.
 - Scroll down to Manage Groups and select the Agent Group to which the Agent is currently assigned.
 - Click Save to apply the changes.
 - Ask the Agent to log out and log back in.
 - After completing these steps, the Agent should be able to view the conversation history.

Unable to access the secure form

- Go to Manage > Management Console > Secure Form Studio > Configure in a new tab.
- Open the required form and verify the assigned skills.
- Ensure the conversation skill is assigned to the form and that the Agent has the same skill assigned in their profile.
- Confirm that only one LP Site is open to ensure you are checking the correct account.
- If the Agent is working from home (WFH), ask them to follow these steps with the assistance of their local IT team:
 - Connect the laptop to a different network, such as a mobile hotspot, to check if the issue persists.
 - Retry using the home Wi-Fi network.
 - Open Developer Tools (right-click on the screen > Inspect > Network tab) and check if the domain URL sy.pccompliance.liveperson.net returns all "true" or any "failed" responses.
 - If all checks are completed and the responses are "Yes," the issue is likely related to the network. Involve your local network team to investigate any blocks.
 - Note that if this issue affects all markets, it may be a broader network problem. Reach out to the South Korea market's local IT team, who are investigating the issue in detail, for further assistance.

Mask/Remove the PCI data from conversation

- To remove PCI data sent as screenshot/image from conversations, follow these steps:
 - Navigate to Automate > Functions and open the Functions page in a new tab.
 - Locate the function `replaceImagesForConversation` (do not select the function).
 - Click the Invoke option.
 - Add the conversation IDs in the payload, ensuring the input is structured as follows:

```
1 {  
2   "headers": [],  
3   "payload": {  
4     "conversations": ["<Conv ID1>", "<Conv ID2>"]  
5   }  
6 }
```

- Click the Invoke button.
 - Confirm that the image is successfully replaced in the conversation after the function completes execution.
- To remove card information sent as a text message in a conversation, contact LivePerson Support through the LivePerson Platform for assistance.

Unable to login to Liveperson Platform

- Go to Manage > Users & Skills.
- Filter for the required user and ensure the Enabled status is set to "Yes."
- If the LP account uses SSO (Single Sign-On): No password update/reset is required.

- If the account uses normal login: Update the password upon request from the Agent or Agent Manager.

Delete the user/Remove access for the user

- Navigate to Manage > Users & Skills.
- Select the required user.
- Disable the user by toggling the Enabled button at the top.
- Under the Groups section, assign the 'Former Agent Group'.
- Click Save to apply the changes.

LINE message is not getting sent to customer (or) vice-versa

- Check if the issue is affecting a specific customer or all customers.
- If the Issue is with a Specific Customer - The problem may be due to the customer's network issue. Contact LivePerson Support for further investigation.
- If the Issue is with a Specific Customer - Verify if the platform services are operational by checking the Service Status Dashboard. If services are running, reach out to Messaging Team to check if the issue is related to the LINE quota limit.

Add/Update/Modify the Pre-defined content

- Navigate to Engage > Campaign Builder.
- Scroll to the bottom of the page.
- Select Predefined Content to add, update, or modify the content.

Incorrect customer Info in Detail Summary Tab

- To be routed to Messaging Dev Team
